綠海龜

綠海龜是海洋爬行動物，繁殖季節為每年六月初至八月，牠們除了繁殖季節而需要返回沙灘外，大部份時間都在大海裡生活。綠海龜們有很精確的導航能力，縱使身處數百甚至數千公里外的覓食地，也能準確地返回出生地繁殖。

Green Turtles

Green Turtles are marine reptiles, spending most of the adult lives in the ocean except nesting on beaches from June to August. They have extra-ordinarily precise navigation capability, which allow them to return to their natal beaches from the feeding sites even hundreds or thousands of kilometers away.
